Granular Materials

Real:

- sand, soil, rock,
- grain, rice, lentils,
- powder, pills, granulate,
- micro- and nano-particles

Model Granular Materials

- steel/aluminum spheres
- spheres with dissipation/friction/adhesion

Why Granular

Numberless applications

- constructions
- everyday life

*Challenges for Physics
and Computation*

- many particles
- segregation
- forces
- localization

Clustering

- vibrated (weak) box with compartments

Experiments:
Twente, NL,
D. Lohse et al. 2001, ...

Clustering

- (strongly) vibrated box with compartments

What is the problem ?

- Excluded volume effects ... crystallization
- Granular medium with ALL densities realized
- Dissipation & Friction & Adhesion
- Out of equilibrium, chaotic
- Non-equipartition of energies
- etc.

...

How to approach ?

Experiments ...

Continuum theory (materials, micropolar, ...)

Statistical Physics

+ Kinetic theory + dissipation + friction

Numerical Modeling

- Monte Carlo (stochastic methods)
- Molecular dynamics simulations (MD)
- Finite Element Method (FEM)

Numerical Modeling Overview

Scales and examples:

- 
- sub-particle (atomistic – molecular dynamics)
 - particle & particle-contact modeling
 - multi-particle modeling (**discrete element method**)
 - system modeling (silo, reactor, ...)
 - using e.g. **FEM** to solve continuum theory
 - process and plant modeling

Methods discussed:

- particle methods** (stochastic-deterministic)
- finite element model** (FEM)

Deterministic or Stochastic Models ?

Method	Abbrev.	Theory
Molecular dynamics (soft particles)	MD	...
Event Driven (hard particles)	ED	(Kinetic Theory)
Monte Carlo (random motion)	MC	Stat. Phys.
Direct Simulation Monte Carlo	DSMC	Kinetic Theory
Lattice (Boltzmann) Models	LB	Navier Stokes

Deterministic or Stochastic Models ?

Method	Determ./ Stochast.	Discrete Time	Discrete Space	Discrete Events	Flexible	Fast
MD (soft p.)	D	X			*****	*
ED (hard p.)	D			X	*	***
MC	S	?			*	**
DSMC	S	X			***	****
LB	S	X	X		*	*****

DCCSE – steps in simulation

see:

pcse.tudelft.nl/index.php?page=introduction

1. Setting up a model
2. Analytical treatment
3. Numerical treatment
4. Implementation
5. Embedding
6. Visualisation
7. Validation

DCCSE – steps in simulation

see:

pcse.tudelft.nl/index.php?page=introduction

- | | |
|-------------------------|---------------------------|
| 1. Setting up a model | 1. Particle model |
| 2. Analytical treatment | 2. Kinetic theory |
| 3. Numerical treatment | 3. Algorithms for MD |
| 4. Implementation | 4. FORTRAN or C++/MPI |
| 5. Embedding | 5. Linux – research codes |
| 6. Visualisation | 6. xballs X11 C-tool |
| 7. Validation | 7. theory/experiment |

Approach philosophy

- Introduction
- Single Particles
- Particle Contacts/Interactions
- Many particle cooperative behavior
- Applications/Examples
- Conclusion

Deterministic Models ...

Method	Abbrev.	Theory
Molecular dynamics (soft particles)	MD	...
Event Driven (hard particles)	ED	(Kinetic Theory)
Monte Carlo (random motion)	MC	Stat. Phys.
Direct Simulation Monte Carlo	DSMC	Kinetic Theory
Lattice (Boltzmann) Models	LB	Navier Stokes

What is Molecular Dynamics ?

1. Specify interactions between bodies

2. Compute all forces

$$\mathbf{f}_{j \rightarrow i}$$

3. Integrate the equations of motion for all particles

$$m\ddot{\mathbf{x}}_i = \sum_{j \neq i} \mathbf{f}_{j \rightarrow i}$$

What is Molecular Dynamics ?

1. Specify interactions
between bodies (for example:
two spherical atoms)

2. Compute all forces $\mathbf{f}_{j \rightarrow i}$

3. Integrate the equations
of motion for all particles (Verlet,
Runge-Kutta, Predictor-Corrector, ...)
with fixed time-step dt

$$m\ddot{\mathbf{x}}_i = \sum_{j \neq i} \mathbf{f}_{j \rightarrow i}$$

Applications & Examples

1. Flow in porous media (fluids)
2. Granular Flow (pipe & hopper)
3. Vibration & Segregation
4. Granular Gases (Diffusion & Clustering)
5. Shear cells (slow, dense flow)
6. Membranes (topology & fluctuations)
7. Adhesion and Sintering (attractive forces)
8. Sound propagation (wave theory)
9. Electro-spray (charged particles = long-range forces)
10. Particle-Fluid coupling

Flow in porous media

Approach philosophy

- Introduction
- Single Particles
- Particle Contacts/Interactions
- Many particle cooperative behavior
- Applications/Examples
- Conclusion

Single particle

Contacts

Many particle simulation

Continuum Theory

Inclined plane

Hopper Flow

Hopper Flow

Silo Flow

Initial

Outflow

Jamming

Silo Flow with friction

$t = 0,200 \text{ s}$

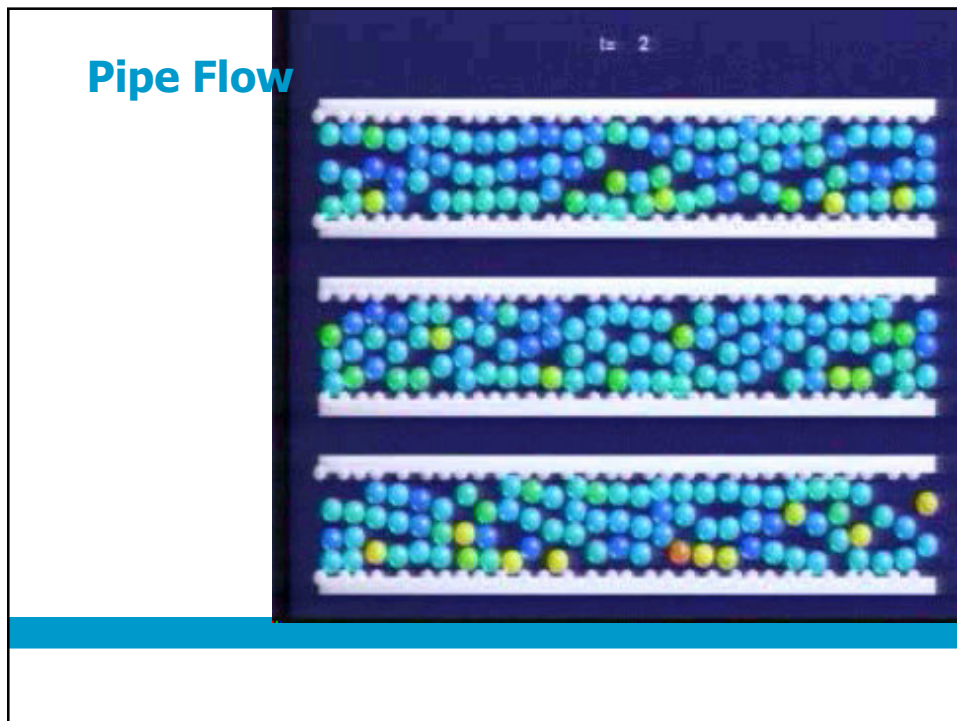

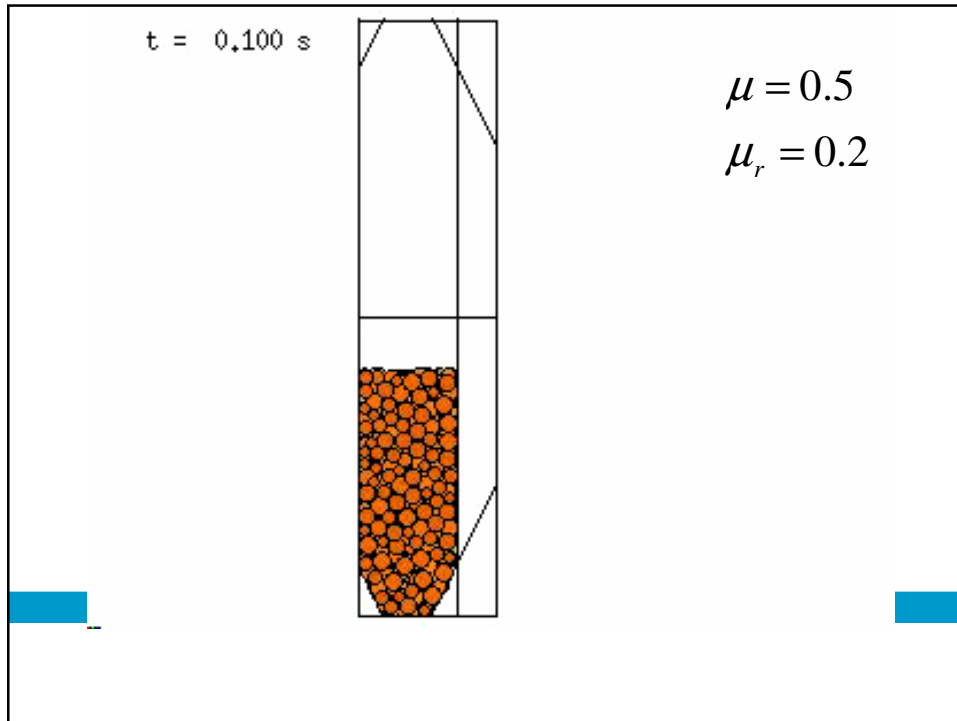

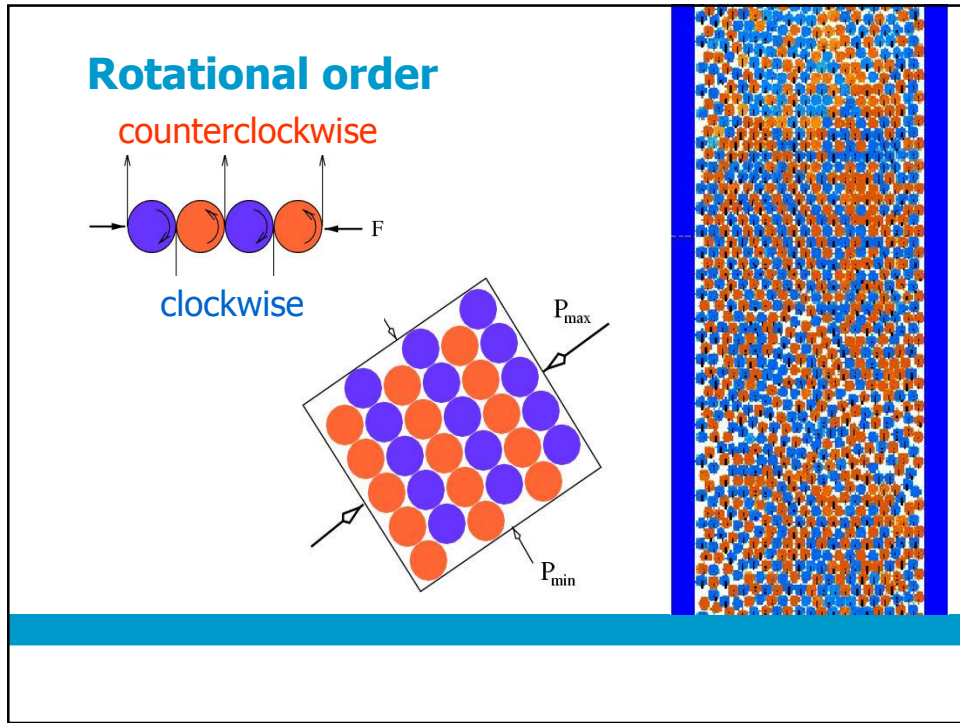

$\mu = 0.5$

$t = 0,100 \text{ s}$

$\mu = 0.5$
 $\mu_r = 0.2$
